INTRODUCTION

1. Now a day, we know that searching of jobs is so difficult in proficient areas the portal developed for the providing the simple and good job searching.

2. With the help of this portal easily the job seeker can submit their resume and get the lot of opportunity of the job related to their profile. And by this website the companies or employer can also find the good and well profiled resume.

PROJECT REQUIREMENTS

Hardware:

The system requires the following hardware:

- RAM: 1 GB (further increase that as per requirement.)
- Hard Disk: 80 GB (further increase that as per requirement.)
- Display: 1024 * 768, True Type Color-32 Bit
- Mouse: Any Normal Mouse.
- Keyboard: Any window Supported Keyboard. 1.5.2

Software:

- Database Server : Microsoft SQL Server
- Web Server : Internet Information Server
- Technologies : HTML,CSS,ASP.NET,JavaScript,JQuery

OBJECTIVE

- Providing a user-friendly interface for easy navigation and search functionality.
- Connecting job seekers with suitable employment opportunities.
- Job Portal will allow job provider to establish one to one relationships with candidates. This Portal will primarily focus on the posting and management of job vacancies
- The online job Portal System that is to be developed provides the members with jobs information, online applying for jobs and many other facilities.
- This system is designed such that ultimately all vacancies will be posted online and would offer employers the facilities to post their vacancies online.

SCOPE

As of Indian market, there is ample opportunities for the job portal sites, as more and more number of educated and skilled young people are coming out each and every year. Also, as the growth rate of India is zooming to be at a healthy rate over 7%, so it is boom time for corporate also. So, more and more number of lucrative careers will be available for the job seekers. So, it is now the right period for the job portal sites to think out of the box, and to make most of the opportunities available.

PROJECT FEASIBILITY STUDY

Technical Feasibility:

Technical feasibility study is concerned with specifying equipment and software that will successfully satisfy the user requirement; the technical needs of the system may vary considerably.

Economical Feasibility:

Economical feasibility is the measure to determine the cost and benefit of the proposed system. A project is economical feasible which is under the estimated cost for its development. These benefits and costs may be tangible or intangible.

Operational Feasibility :

Operation feasibility is used to check whether the project is operationally feasible or not. Our project is mainly different from the other system because of its web-support feature. So the measure for operational feasibility is something different from other system.

CONCLUSION & FUTURE SCOPE WORK

It has been a great pleasure for me to work on this exciting and challenging project. This project proved good for me as it provided practical knowledge of not only programming in ASP.NET web based application and no some extent Windows Application and SQL Server, but also about all handling procedure related with online job portal. It also provides knowledge about the latest technology used in developing web enabled application and client server technology that will be great demand in future. This will provide better opportunities and guidance in future in developing projects independently.
